

Ravco 75-351 Hinge (Single or Double)

HINGES

A universal hinge for light and heavy duty high frequency openings.

ARA Manufacture's Ravco 75-351 hinge is made from aluminium and is the perfect solution for all high frequency doors and openings. This model can be double machined for doors up to 120kgs or quad machined for doors up to 230kgs.

RAVCO

OVERVIEW

ARA Manufacture's Ravco 75-251 hinge can be used as a single or double depending on the weight of the door or opening. Made from a sealed-joint hinge, the design eliminates finger-catching gaps and is self-proofed from weather, sound, sight and tamper. The unique design eliminates the need for morticing, hinge punching or reinforcing plates on the metal which reduces labour costs and doors are held free of sag or deflection.

APPLICATIONS

ARA Manufacture's Ravco 75-351 hinge is designed to be used on all high frequency openings. The hinge can be double machined for up to 120kg or quad machine for up to 230kgs and can be used on bullet and fire rated applications.
