

# SecuraGate®

PERIMETER SECURITY

**Australia's leading specialist in perimeter security and vehicular control solutions.**

ARA Manufacture's Leda offers a complete range of integrated perimeter security solutions including industrial and security gates, boom gates, swing gates, bi-fold gates, tyre spikes, turnstiles, barriers and fences.

## OVERVIEW

Designed, manufactured and installed in Australia by ARA Manufacturing, these Leda security solutions are strong and durable, made from corrosion-protected steel. Footings are engineer-designed to provide real security and the control cabinets are designed to AS standards, with variable speed drive motors.

## APPLICATIONS

The ARA Manufacture's Leda SecuraGate® solutions are designed for a range of security and vehicle control needs and are used in industrial areas, airports and shipping ports, military complexes, power stations, private car parks, distribution depots, government utilities, and mining sites.

## PRODUCT RANGE

### Industrial and security gates

Leda's industrial and security track and cantilever gates are used for a range of needs, from once-a-day opening for factories and industrial sites through to constant opening required for access control in high security operations.

### Boom gates

Leda's boom gate range regulates vehicular traffic in applications from private carparks through to high security premises.

### Swing gates

Leda has five types of swing gates available including premier, advantage, industrial, security and high security gates. Swing gates can be either single or dual leaf and can be operated manually or automated, with bi-fold options also available.

### Bi-fold gates

Leda's bi-fold gates provide a higher level of security than boom gates, are much faster than traditional roller shutter doors and can be operated by all major access control systems.

### Full and half height turnstiles

Leda offers a range of half and full height turnstiles manufactured from a broad range of materials suitable in many applications.

### Fences

Fencing importantly defines the parameters of a secure area. Leda offers a range of fencing designs and supporting products with end-to-end solutions.

### Tyre spikes

Leda's tyre spikes provide security protection for restricted areas against forced and unauthorised entry or exit of motor vehicles. Tyre spikes work by destroying vehicle tyres and immobilising the vehicle. Available in both manual and automatic models, tyre spikes can be installed as single or multiple units.

### Concrete barriers

Concrete barriers are a formidable visual deterrent and can be configured to meet both security and architectural requirements. Leda concrete barriers are available in a variety of shapes, textures and colours.
