

Securaguard 501 pass through drawer

HIGH SECURITY PASS THROUGH UNITS

Specifically designed for exchanging EFTPOS machines and larger items.

ARA Manufacture's Sealeck Securaguard 501 pass through unit is a high security tray for exchanging EFTPOS machines and other large items. The material components of the Sealeck Securaguard 501 pass through unit have been tested to meet the G0, G1, G2, R1 or S1 bullet resistance to Australian standard AS/NZ 2343: PART 2: 1984.

OVERVIEW

With a simple slide operation, the pass through unit has a stainless steel 304 #4 finish, clear perspex lid and a lockable drawer. An option voice grille can be installed above the box to enable voice transfer (The voice transfer grille does not comply with AS2343 ratings). The pass through unit can also be made to order to suit larger items or extended wall thicknesses.

The pass through unit is suitable for G0, G1, G2, and R1/S1 bullet ratings to AS2343: 1984, Options are also available for the unit to be best to AS2343:1997.

APPLICATIONS

ARA Manufacture's Sealeck Securaguard 501 pass through drawer can be used for government and military buildings and company buildings that operate in high threat level areas and require bullet and attack resistance.
