

Securaguard Steel Frame Window Unit

WINDOWS AND GLASS

An attack and bullet resistant window unit.

ARA Manufacture's Sealeck Securaguard steel frame window unit is an attack and bullet resistant complete unit with glass that can be supplied along or in conjunction with an attack and bullet resistant pass through unit or door.

OVERVIEW

The material components of the Sealeck Securaguard steel frame window unit and glass satisfy Australian requirements for AS-2343.2 1997 (Bullet resistant standard) and AS 3555, 1988 (Intruder resistant standard).

Custom made to suit a range of wall thicknesses and structural openings, the windows are supplied in primed steel finish for the window framing and glazing beads. Windows are supplied with the glazing beads pre-fitted for simple site installation once the frame has been built into the required wall. Various wall fixing options are available for steel, timber stud and concrete wall openings. Split 2-Piece frames are also available for retro fit applications and where the wall thickness may vary.

The glass is available in several bullet resistance ratings – G1, G2, R1/S1 & R2.

APPLICATIONS

ARA Manufacture's Sealeck Securaguard steel frame window unit can be used for government and military buildings and company buildings that operate in high threat level areas and require bullet and attack resistance.

SPECIFICATIONS

- **Sizes:** All window units are made to order.
- **Maximum glass panel size:** 1200 x 2400mm
- **Framing finish options:** Powder coating, 2 pack wet painted, or 304 #4 / 316 #4 stainless-steel finish available at extra cost. Pressed metal profile options also available.
