

Solid Core Door Set

SOLID CORE DOORS

A robust and versatile solid core door set.

ARA Manufacture produces a lightweight, but solid core door that can be custom made to fit a range of door heights, widths and thicknesses.

OVERVIEW

A flush panel solid core door leaf, the core can be made from a number of options depending on requirements.

The foam core is a lightweight, but robust core that has higher acoustic reduction qualities than a honeycomb core.

The particle board core comes in two options – standard HMR particle board and a lightweight particle board that is up to 50% lighter than the standard.

The blockboard core can also be used for doors in high security zones. These door cores are made up of laminated timber sandwiches between the nominated faces.

The facing is laminated as specified and edges are Tasmanian Oak.

APPLICATIONS

ARA Manufacture's solid core door sets suit a range of door openings that require strength and acoustic reduction.

SPECIFICATIONS

- **Thickness options:** 35mm, 40mm, 42mm, and 45mm
- **Edges:** Mitred edges when laminated face is specified. Otherwise butt jointed.
